- nice long oval tubers
- very good table quality

# Bellaprima

very early salad potato with nice long oval tubers

Maturity	very early	Tuber tuber shape eye depth skin flesh colour raw discolouration	long oval shallow yellow, smooth yellow low
Cooking type (EAPR)	A-B		
Consumption quality	high quality ware potato (salad type), excellent flavour, stable yellow flesh colour, low discolouration after boiling	Resistances PCN Potato wart disease Potato Leafroll Virus Potato Virus Y (PVY) tuber blight Rhizoctonia common scab	Ro 1 - 5 D1 high very high high high medium - high
Yield	high marketable yield, medium sized tubers, fine uniform grading		
Youth development	initially slightly inert, later rapid		
Dormancy	high, good storability	Sensitivities spraing bruising mechanical damage	low low medium

**Bellaprima** preferably should be grown on soils in good agricultural condition. Production under fleece or foil, chitting or at least careful induction of sprouting before planting is recommended in order to accelerate maturity, skin set and harvest ability.

**Bellaprima** is growing uniform medium sized tubers and reaches very early high marketable yield. The tuberisation rate is medium to high, the recommended plant density should be approx. 43,000 plants/ha.

**Bellaprima** is bulking the tubers in a slightly spreading nest, therefore it is recommended to plant the seed tubers approx. 2 cm deeper than usual.

**Bellaprima** yields nice long oval tubers with smooth skin and very good table quality.

All particulars are based on official variety trials and/or our own experience.  
However, as potatoes are natural products we cannot undertake any liability for these details.
