EUROFIT

EUROPLANT

EUROFIT - medium early starch potato with broad resistance against nematodes and wart disease

Growing recommendations				
Site requirements	average to better soil conditions; locations suseptible to rust spot should be avoided			
Planting	**Ø g/tuber**	**Row width**		**Tubers/ha**
		75 cm	**90 cm**	
	70 g	35 cm	29 cm	38,500
	80 g	39 cm	33 cm	34,100
	Planting depth	standard		
	Seed preparation	has a good dormancy; sprout stimulation evenly before planting (7-10 days)		
	Seed dressing	dressing against Rhizoctonia solani is recommended		
Herbicides	no sensitivities are known when used properly			
Foliage	average leaf health; timely and regular use of fungicides against late blight is required			
Harvest	ensure gentle harvest			
Fertilization incl. return of previous crop at medium supply level				
Nitrogen (N)	high - compared to the local standard (2/3 before planting and 1/3 later)			
Phosphorus (P_2O_5)	100 kg/ha (water soluble phosphate at planting)			
Potassium (K_2O)	250-190 kg/ha (up to 80 kg/ha chloride possible; on lighter soils split doses)			
Magnesium (MgO)	70 kg/ha (for yield and quality assurance)			
Variety characteristics				
Maturity	medium early	**Tuber characteristics**		
Starch content	shows very high yields with high numbers of tubers and starch content	Tuber shape Eye depth Flesh colour Skin colour Skin Number of tubers	roundoval medium light yellow yellow rough high	
Yield	good tuber yields			
Youth development	initially hesistant, later rapid	**Resistances**		
Dormancy	good dormancy	PCN Nematode tolerance Potato wart disease	Ro1 (9), Ro2/3 (8), Ro5 (8) Pa2 (9), Pa3 (9) tolerant 1, 2 (a), 6, 8/18	
		Sensitivities		
		Common scab Spraing Bruising Mechanical damage	medium high high medium - high	

All particulars are based on official variety trials and/or our own experience. However, as potatoes are natural products we cannot undertake any liability for these details. (08/2026)
