FLORIDANA

EUROPLANT

FLORIDANA - bright skin and uniform tuber sizes with the most beautiful export optic

Growing recommendations				
Site requirements	prefers average to better soil conditions with uniform supply of water and nutrients			
Planting	**Seed material sorting 35/55**	**Row width**		**Tubers/ha**
		75 cm	**90 cm**	
		28-30 cm	23-25 cm	46,000
		for large size tubers + 2-4 cm		
	Planting depth	standard		
	Seed preparation	has a good dormancy; sprout stimulation evenly before planting (7-10 days)		
	Seed dressing	dressing against Rhizoctonia solani recommended		
Herbicides	no sensitivities are known when used properly			
Foliage	average leaf health; timely and regular use of fungicides against late blight is advisable			
Harvest	standard			
Fertilization incl. return of previous crop at medium supply level				
Nitrogen (N)	low - compared to the local standard (low input variety, whole amount at planting)			
Phosphorus (P_2O_5)	100 kg/ha (water soluble phosphate at planting)			
Potassium (K_2O)	350-270 kg/ha (preferably as sulphate; on lighter soils split doses)			
Magnesium (MgO)	70 kg/ha (for yield and quality assurance)			

Variety characteristics			
Maturity	medium early	**Tuber characteristics**	
Cooking type	B	Tuber shape	roundoval
Consumption quality	mainly firm cooking, low discolouration after cooking, good taste	Eye depth	shallow
		Flesh colour	light yellow
		Skin colour	yellow
		Skin	smooth
		Number of tubers	medium - high
Yield	high yields with uniform large sized grading, high marketable yield > 50 mm	**Resistances**	
		PCN	Ro1 (9)
Youth development	rapid	**Sensitivities**	
Dormancy	very dormant, suitable for long-term storage	Common scab	medium
		Spraing	low
		Bruising	very low
		Mechanical damage	low

All particulars are based on official variety trials and/or our own experience. However, as potatoes are natural products we cannot undertake any liability for these details. (07/2023)
