

varieties, competence & service

Annalena

medium early quality salad potato

- very attractive tuber shape
- uniform grading, suitable for packing
- high marketable yield
- very good culinary quality

Annalena

medium early quality salad potato

Annalena is a salad potato with very nice tuber appearance and good culinary quality.

Variety characteristics			
Maturity	medium early	Tuber	Tubers shape Eye depth Skin Flesh colour Raw discoloration
Cooking Type (EAPR)	A		
Consumption quality	quality salad potato; very good flavour; low discoloration after cooking		
Yield	high marketable yield	Resistances	PCN Potato Virus Y (PVY) Common scab
Youth development	later rapid		
Dormancy	high, good storability	Sensitivities	Spraing Bruising Mechanical damage
			low low - very low medium - low
Growing recommendations			
Site requirements	preferably grown on medium soils with uniform water and nutrient supply; due to the high tuber number uniform water supply should be ensured by means of irrigation, if applicable		
Planting	planting density	approx. 40,000 plants/ha (seed size 35/50 mm)	
	planting depth	normal	
	seed preparation	sprouting stimulation by means of temperature shock 3 days before planting; sprout breaking must be avoided!	
	seed dressing	preventive control of <i>Rhizoctonia solani</i> is generally recommended	
Foliage	routine protective control of late blight is recommended		
Herbicides	Annalena has a slight sensitivity to Metribuzin, dose rates post emergence application should be avoided		
Fertilization		further information	
Nitrogen	low-medium - compared to local standard		
Phosphorus	100 kg/ha (at planting, water soluble phosphate)		
Potassium	200 - 250 kg/ha (at medium soil supply class)		
Magnesium	60 kg/ha		

All particulars are based on official variety trials and/or our own experience. However, as potatoes are natural products we cannot undertake any liability for these details.
