

varieties, competence & service

Leandra

medium early floury cooking ware potato with good French Fries quality

- long oval tuber shape
- floury cooking ware potato
- nice, smooth skin
- very good frying colour

Leandra

medium early floury cooking ware potato with good French Fries quality

Variety characteristics			
Maturity	medium early	Tuber Tuber shape Eye depth Skin Flesh colour	long oval shallow yellow, smooth light yellow
Cooking Type (EAPR)	C		
Consumption quality	floury cooking table potato		
Yield	very processing quality, excellent frying colour	Resistances PCN Potato wart disease Leaf blight Common scab	Ro 1 D1 + D6 * medium - high medium - high
Youth development	rapid		
Dormancy	high, very good storability	Sensitivities Spraing Bruising Mechanical damage	low - medium low - medium medium
Growing recommendations			
Site requirements	should be grown on soils with uniform water and nutrient supply		
Planting	planting density	~ 40.000 plants/ha (seed size 35/55 mm) / for ware production => check QR Code for more details	
	planting depth	same as local standard	
	seed preparation	sprouting stimulation short before planting	
	seed treatment	preventive control of <i>Rhizoctonia solani</i> is generally recommended	
Foliage	Leandra should routinely be treated with suitable fungicides for control of late blight		
Herbicides	no sensitivities known		
Fertilization		further information	
Nitrogen	medium - compared with local standard		
Phosphorus	100 kg/ha (medium soil supply class; water soluble phosphate to planting)		
Potassium	200 - 250 kg/ha (medium soil supply class, preferably potassium sulphate)		
Magnesium	60 kg/ha		

All particulars are based on official variety trials and/or our own experience.
However, as potatoes are natural products we cannot undertake any liability for these details.
