

# Zuzanna

medium early, robust starch potato with high resistance to foliage disease

Maturity	medium early	Tuber Tuber shape Eye depth Skin Flesh colour	short-oval medium yellow light yellow
Yield	very good starch yield due high tuber yield and high starch content		
Quality Starch content	high, safe yield	Resistances Potato wart disease PCN Virus diseases Leaf blight Common scab	D1 Ro 1, Ro 4 high high - very high medium
Youth development	rapid, quick developing canopy		
Dormancy	very high, very good storability	Sensitivities Bruising Mechanical damage	medium - high medium - high

**Zuzanna** has medium demands to soil and water supply. Soils in good agricultural condition and small friable structure are advantageous.

**Zuzanna** has as medium tuberisation rate and is growing medium to large sized tubers. A planting density of approx. 44,000 plants/ha is recommended.

**Zuzanna** should be fertilized at local standard level. Usually 160 kg/ha N (including soil supplied  $N_{min}$ ) and 100 kg/ha  $P_2O_5$  and 150 kg/ha  $K_2O$  fit to demands of **Zuzanna** at medium soil nutrient content classes.

**Zuzanna** should be harvested carefully. A good soil cushion on the web of the harvester is advantageous in order to prevent from mechanical damage and bruising.

**Zuzanna** has stable high starch yield and good disease resistance.

All particulars are based on official variety trials and/or our own experience.  
However, as potatoes are natural products we cannot undertake any liability for these details.
