- young, health and environmentally conscious consumers
- people in search of something special

Use

- table varieties with firm & mainly firm cooking properties
- particularly suitable for cooking, frying and baking

Lower Carb Montana & Coronada

Lower Carb table potatoes

In search of innovative varieties, we have developed **MONTANA & CORONADA**, which are characterised by a very low energy content. The average energy content is reduced by at least 30%, relative to corresponding comparison varieties*

**As potatoes are a natural product, the absolute content of ingredients can vary due to environmental influences. Thus, the relative energy content is meaningful.*

Controlled cultivation

MONTANA & CORONADA are grown on selected farms. On all fields, the farmers work in an environmentally friendly, sustainable manner, according to conventional or organic guidelines. Our low carb varieties are produced with reduced inputs (low input-varieties). The cultivation is accompanied by experienced potato experts, from planting to harvest.

Average nutritional values per 100 g

The nutritional information refers to potatoes that have been peeled, unchopped and cooked for 20 minutes (without salt).
